

We conduct and host cutting-edge crop biotechnology research and development (R&D) activities, including joint research projects, forming dedicated research teams, and implementing impactful research programs.

We provide essential R&D-related services and training to DA agencies and our network. Our goal is to equip stakeholders with the skills to effectively apply modern crop biotechnology tools.

COLLABORATIVE
MEETING
& MOU SIGNING

We actively build and strengthen our connections within the R&D network. We also secure funding for projects from both local and international institutions, as well as public and private donors.

We promote the commercialization and transfer of developed technologies. We also foster a culture of knowledge-sharing to ensure our network and stakeholders have easy access to a wealth of information.

DEPARTMENT OF AGRICULTURE

CROP BIOTECHNOLOGY CENTER

Biotech for Better Crops for Better Lives

ABOUT US

The **DA-Crop Biotechnology Center (DA-CBC)** is one of the three biotechnology centers under the DA-Biotechnology Program Office (DA-BPO). Through DA-Administrative Order No. 26 Series of 2021, we are mandated to develop and apply modern biotechnologies to boost the nation's agricultural productivity, build the skills of our research partners, and foster a collaborative culture of knowledge-sharing to ensure a more food-secure and resilient Philippines.

TRAINING/ CONFERENCE VENUES

- Plenary Hall (600 pax)
- Multipurpose Hall (300 pax)
- Training Rooms (30 pax)

CORE PROGRAMS

**TECHNOLOGY DEVELOPMENT
AND INNOVATION**

**R4D BIOTECHNOLOGY
CAPACITY-BUILDING SERVICE**

**PARTNERSHIPS AND
FUND GENERATION**

**TECHNOLOGY
COMMERCIALIZATION
AND MANAGEMENT**

R4D FACILITIES

MOLECULAR GENETICS AND GENOMICS

Identifies key genes for trait improvement and marker development, accelerating the breeding of improved crop varieties.

GENOME ENGINEERING

Uses precision breeding tools to improve traits of interest; develops genome-edited crops through CRISPR-Cas Technology and Synthetic Genomics.

TISSUE CULTURE

Enables rapid plant propagation and regeneration of improved plants, supporting efficient production and distribution of advanced planting materials.

SYSTEMS BIOLOGY

Provides a comprehensive understanding of plant systems, enabling the identification of novel targets for metabolic engineering and the development of innovative biotech solutions.

MICROBIAL BIOTECHNOLOGY

Develops cutting-edge microbial solutions to enhance crop and soil health.

BIOINFORMATICS AND COMPUTATIONAL BIOLOGY

Analyzes complex datasets to identify key genetic markers and predict gene function, accelerating the discovery and development of new biotech tools.

MOLECULAR DIAGNOSTICS

Develops rapid and accurate diagnostic tools for detecting plant diseases and pests, enabling early intervention and preventing crop losses.
