

DA - CROP BIOTECHNOLOGY CENTER

FREQUENTLY ASKED QUESTIONS ?

No. 1 • September 2025

TECHNOLOGY DEVELOPMENT AND INNOVATION (TechDI)

What is the focus of the Center's TechDI component?

The TechDI component of the Center focuses on the development of research programs, implementation of collaborative R&D projects, and provision of mentorship and assistance in conducting crop biotech research aligned with the priorities of the Department of Agriculture.

What are the types of technologies the Center develops?

Currently, the Center develops crop improvement technologies such as the generation of better breeding lines, disease management strategies, and value-added products. Also, the Center conducts validation studies supporting the transfer and adoption of existing technologies.

How can we propose a technology for research or co-development purposes?

Collaborative R&D projects may be proposed through call for proposals or initiated through new or existing institutional partnerships.

R4D BIOTECHNOLOGY CAPACITY BUILDING SERVICE (RBioCBS)

Who is eligible to participate in the Center's capacity building programs?

Various stakeholders—including researchers, regulators, educators, and students—are eligible to participate in specific training programs of the Center.

What are the capacity building services the Center provides?

The Center offers 4-day hands-on training on molecular biology for researchers, regulators, and educators. The Center also accommodates on-the-job trainees, interns, and graduate or undergraduate thesis students from partner state universities and colleges, with limited slots available.

Does the Center offer customized training sessions?

Yes. Special training may be requested; however, approval is subject to the availability of funds and expertise of the Center.

PARTNERSHIP AND FUND GENERATION (PFGen)

What are the types of partnerships the Center engages in?

The Center is open to collaborating with government or private institutions— both local and international— through formalized partnerships aimed at advancing crop-related biotech research, development, and innovation in the Philippines.

Does the Center provide funding for research proposals?

No. The Center is only responsible for coordinating and implementing the R4D agenda under the DA-Biotech Program Office, including the review, appraisal, and endorsement of research proposals to DA-BPO for possible funding.

Are unsolicited proposals accepted?

Submission of unsolicited research proposals is highly discouraged. The development of research programs for annual funding depends on the Department of Agriculture's prioritization of programs, activities, and projects.

TECHNOLOGY COMMERCIALIZATION AND MANAGEMENT (TechCM)

What are the Center's services related to TechCM?

DA-CBC offers the following services:

1. Development of Information, Education, and Communication (IEC) materials to effectively disseminate information on developed technologies.
2. Promotion of developed technologies through various channels, including digital platforms, public outreach, and industry engagement.

How does the Center support the commercialization of biotech products?

DA-CBC only provides guidance to interested partners on their patent or copyright application for developed technologies. However, the facilitation and completion of the application process will be done by the partners.
