DA-CROP BIOTECHNOLOGY CENTER 2025 CALENDAR

The DA-Crop Biotechnology Center (DA-CBC) 2025 Calendar presents a diverse collection of crop biotechnology products and innovations from around the world. It serves as a visual representation of the dedication and innovation of researchers and scientist working to enhance agricultural productivity and sustainability.

The DA-CBC acknowledges the contributions of institutions and private companies worldwide, which collective achievements have helped address the pressing challenges facing agriculture today.

Golden Rice

*Golden Rice is enriched with
beta-carotene developed to help
address vitamin A deficiency.*

Herbicide-tolerant Soybeans

*This genetically-modified soybean can
withstand application of herbicides that would
normally damage or kill the crop.*

Notes:

Non-browning Gene-edited Banana

Non-browning bananas are designed to resist the enzymatic browning process that typically occurs after the fruit is cut or bruised, providing longer-lasting bananas and decreasing transportation and storage losses.

Notes:

Pink Pineapple

Aside from its eye-catching color, the pink pineapple is rich in lycopene and beta-carotene- both powerful antioxidants that can contribute to overall health, potentially reducing the risk of chronic diseases.
